                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        **SIMILARILY).

**PIM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).

**ISCELLANEOUS: Oligomerization may protect the enzyme against denaturation in an acidic environment (By similarity).

**ISIMILARITY: Belongs to the urease family.

**ISIMILARITY: Belongs to the urease family.

**ISIMILARITY: Belongs to the urease simily.

**ISIMILARITY: Belongs to the urease similarity.

**ISIMILARITY: Belongs to th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -i- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-i- COFACTOR: Binds 2 nickel ions per subunit (89 similarity).
-i- SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex (8y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Proton donor (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Optimum pH is 8.0. Active from pH 4.0 to 10.0; SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex. PTM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "The complete genome sequence of the gastric pathogen Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROTEIN SEQUENCE OF 1-15.

-i- MISCELLANEOUS: Oligomerization may protect the enzyme against denaturation in an acidic environment.
-i- SIMILARITY: Belongs to the urease family.
-i- CAUTION: In Helicobacter the beta subunit is what is known in other bacteria as the alpha subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Proton donor (Probable).

Purification and characterization of the urease enzymes of Helicobacter species from humans and animals.";

Infect. Immun. 60:5259-256(1929).

-!- CATALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).

-!- CATALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).

-!- SUBUNIT: Consists of two subunits (alpha and beta).

-!- SUBUNIT: Consists of two subunits (alpha and beta).

-!- FTM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).

-!- SIMILARITY: Belongs to the urease family.

-!- CAUTION: In Helicobacter the beta subunit is what is known in

```
differentially produced on a cell in a metastatic state compared to a similar non-metastatic cell, and does not bind to a non-activated alphavbeta 3 integrin receptor. Also described are: a pharmaceutical composition comprising the antibody; treating a disease state in a mammal composition comprising a tumor cell variant with a metastatic homing propensity to a target tissue; producing an antibody phage population having affinity for a tumor cell target; detecting tumor cells in a mammal by treatment with a cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal; detecting an activated cell surface receptor on a metastatic tumor cell surface in a mammalian tissue sample; interfering with cells liable to undergo metastasis associated with a disease state; identifying cells liable to undergo metastasis associated with a disease state; an isolated Bc-12 or Bc-15 polymucleotide comprising a nucleotide sequence that has at least 90% or 73 priven in the great study of 12 or 752 by sequence (SEQ ID NO.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       production the specification; an isolated polypeptide comprising a nucleotide sequence that has at least 90% sequence identity to SEQ ID NO. I or 3, or shares a biological function with Bc-12 or Bc-15; a vector comprising the polymucleotide; an expression vector comprising the polymucleotide; an expression vector comprising the polymucleotide in which the nucleotide sequence of the polymucleotide is operatively linked with a regulatory sequence that controls expression of the polymucleotide or progeny of the cell; and determining anti-metastatic activity of a test compound in a mammal. The antibody is useful for treating neoplastic disease, solid tumor, hematological malignancy, leukenia, colorectal cancer, benign or malignant breast cancer, uterine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polycystic ovary syndrome, endometrial polyps, prostate cancer, prostatic hypertrophy, pituitary cancer, adenomyosis, adenocarcinomas, meningioma, adelanoma, bone cancer, multiple myeloma, CNS cancer, glioma, or astroblastoma. This is the amino acid sequence of single chain variable fragment antibody BC-12.
  .c. o.rv bc-12 or Bc-15 antibody comprises ligand mimetic, which specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                   The invention describes an antibody comprising a ligand mimetic, w

                                                                                                                                                                                                                                                                                                                          The invention relates to a humanized neutral genetically engineering Fab antibody (HCMV-Fab-2 and HCMV-Fab-6) of human cytomegalovirus. The Fab fragment, gene product and application are also disclosed. The recombinant antibody is determined by the specific gene sequence in the hypervariable region of the light-chain and heavy-chain variable regions. The antibody can be used for preventing and treating the diseases associated with HCMV infection. The current sequence represents a HCMV-Fab-6 amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

```
The invention relates to a novel method for characterising a viral infection in a host. The method comprises identifying at least one viral-based sequence element in a blological sample obtained from the host, determining a homology profile of the viral-based sequence element with at least one endogenous host element and characterising the viral infection based on the homology profile, where the homology profile is indicative of a viral behaviour of the viral infection in the host. The method of the invention demonstrates virucide applications and may be useful for preparing a medicament for detection and or treating a viral infection or related condition, such as an autoimmune disease e.g. type infection may be due to HCV (Hepatitis C virus), HIV or a member of a Retroviridae, Plaviviridae, Plaviviriridae, Plaviviri
                                                                                                                Characterizing a viral infection in a host, for developing treatment for severe acute respiratory syndrome-coronavirus (SARS-CoV), by determining homology profile of a viral-based sequence element with an endogenous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (CDR) 2"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Complementarity determining region (CDR) 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       specific viral variants. The current sequence is that of a human immunoglobulin light chain kappa (IgVLk) protein of the invention.

The invention relates to the use of human anti-cytotoxic T lymphocyte antigen-4 (anti-CTLA-4) antibody in the preparation of a medicament for the treatment of cancer such as bone cancer, pancreatic cancer, skin cancer, cutaneous or intraocular malignant melanoma, uterine and ovarian cancer, cancer of the anal region, stomach cancer, breast cancer, testicular cancer, uterine cancer and carcinoma of the fallopian tubes. The present sequence is human A10/A26 antibody light chain germline
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    rmaring numenized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                              Use of human anti-cytotoxic T lymphocyte antigen-4 antibody in the preparation of medicament for the treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a method of making a humanised antibody, comprising making chimeric antibodies containing a complementarity determining region (CDR) from a non-human antibody and appropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human germline light chain variable region gene segment #22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; light chain variable region; VK; humanised antibody; chimeric antibody; complementarity determining region; CDR; canonical CDR structure type.

humanised antibodies with suitable therapeutic properties. The antibody has high affinity and low immunogenicity without need for comparing tramework sequences between non-human and human antibodies. This sequence represents a human light chain variable region gene segment used in the creation of humanised antibodies
framework sequences (I) of human antibodies. (I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibodies as the basis for selection, for humanisation. The method is useful for making a humanised antibody or a converted antibody. The method is applicable for converting a subject antibody sequence of any subject species. The method is immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support non-human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for direct comparison of framework sequences, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain

Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable positions.

Example 16; Fig 40b; 135pp; English

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the

The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position of since a selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The present sequence is an antibody wariable region sequence used to illustrate the invention.
antibody, including the selected amino acids at other variations and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical property of antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way be variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable

The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (i) providing an initial antibody having repedicitive for a target; (ii) determining the sequence of a variable region of the initial antibody; (iii) selecting a first component of the sequence of the initial antibody; (iii) selecting a first component of the sequence of the first component to sequence sontained in a reference database of antibody sequences or antibody fragment sequences from a rarget species; (v) selecting a sequence from an antibody in the database of than the first component, the second component selected from the group selecting a second component, the second component selected from the group consisting of FRI, FR2, FR3 and FR4; (vi) comparing the sequence of the second component to sequences contained in a reference database of the second component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from the target species; (viii) selecting a sequence from the database which demonstrates a high degree of homology to the second component and which is from a different antibody than the selected antibody; and (ix) operatively linking the selected framework sequences from ever more complementarity determining regions (CDRs) of the initial antibody to produce a hybrid antibody or hybrid antibody fragment. The method is useful for producing a hybrid ratibody or hybrid antibody fragment regions from a single antibody variable heavy or hybrid antibody fragment to receive the CDRs. This produces antibods enter the cuse antibody variable heavy or variable light chain to receive the CDRs. This produces antibodies that are highly homologous and exhibit reduced immunogenicity while maintaining an optimum binding profile. This sequence represents the cuse antibody from a natibody from the Vkappa gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.
                                                                                                                                                hybrid antibody; antibody; framework region; homology; immunogenicity.

recombinant catalytic polypeptides of the invention. These comprise a human antibody light chain operably joined to a heterologous antibody heavy chain. The light chain has a serine protease dyad and endopeptidase activity, and the heavy chain has a predetermined specificity for a target protein. By joining 2 heterologous human antibody chains, one of which supplies the catalytic activity to hydrolyse polypeptides and the other the binding specificity for a target protein, the invention provides for the construction of a repertoire of proteases with customised protein substrate specificities of potentially unlimited number and thus makes possible the effective treatment and/or prevention of any medical condition attributable to the presence or overexpression of any medical condition attributable to the presence or overexpression of any medical condition attributable to the presence or overexpression of any dentified protein. The invention also provides nucleic acids concoding the catalytic antibodies (which can be used for gene therapy), host cells, transgenic non-human animals, and methods of cleaving a target protein (in vitro or in vivo) using a recombinant catalytic polypeptides with altered enzymatic activity, and a method of altering the enzymatic activity, and a method of altering the enzymatic activity, and a method of altering the enzymatic activity of the enzymatic activity of the recombinant catalytic polypeptides by
A17. This is one of a repertoire of human kappa light chain sequences ADO07310-ADO07349 screened for putative catalytic triads. Several genes encoding such light chains ADO07282-ADO07309 were cloned for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mutating at least one complementarity determining region of the heavy chain. A serine protease triad was identified in the present sequence, which can be used as the light chain sequence in catalytic polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing polynucleotide encoding human germline antibody V-region for generating full-length antibody germline V-region genes, by obtaining N or J minigene and joining V minigene with J minigene, or joining J minigene with V minigene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibody engineering; antibody; antibody production; gene library; DNA recombination; gene amplification; primer extension; light chain variable region.

The present invention relates to producing germline antibody genes by a completely in vitro approach that mimics the natural process of V(D)J crecombination. The antibody genes are completely human and native in the crecombination. The antibody genes can be constructed which represent an unselected population representing the entire antibody crepertoire. The method uses gene amplification to produce a V minigene, and a hybrid primer capable of hybridizing to a V minigene and either a D or V minigene. The hybrid primer facilitates recombination of a V contingene to a D or J minigene to produce a full length V-region gene. Also disclosed is a library comprising member polynucleotides encoding exogenously rearranged human germline antibody V-regions. In producing complyincleotide encoding a human germline antibody V-region, a D minigene or sisfurther joined to the 3' minigene in so obtained by chemical confinition of the V minigene with at least two or the J minigene in so betained by chemical synthesis or by amplification from a germline DNA library. Joining the V minigene with at least two or three oligonucleotide primers. The V minigene is derived from human immunoglobulin heavy chain locus. The V-region also comprises a serine protease triad. The human germline antibodies can be used as precursors to more high affinity antibodies, and are useful in the generation of efficiently pairing libraries of heavy and light chain kappa region peptide %\$

                                                                    for a host. The method involves comparing a parent protein sequence with natural protein sequences from a host, analyzing the amino acid strings of the parent sequences from a host, analyzing the amino acid strings of the natural protein sequences, and substituting amino acids of parent protein sequences with corresponding amino acid strings of a natural protein sequence on an amino acid string. The method is useful for generating a variant protein. The method is useful for compared to a parent protein. The method enables the generation of variant protein an increased host string content and reduced variant protein an increased host string content and reduced variant protein many an increased host string content and reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel method for generating a variant protein for a host. The method involves comparing a parent protein sequence with natural protein sequences from a host, analyzing the amino acid strings of the parent sequence with corresponding amino acid strings of each of the natural protein sequences, and substituting amino acids of parent protein sequences with corresponding amino acids of anatural protein sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The cancer is chosen from breast cancer including metastatic breast cancer, lung cancer including small-call lung cancer, bone cancer, pancreatic cancer, skin cancer, cancer of the head or neck, melanoma including coetaneous or interlobular malignant melanoma, uterine cancer, ovarian cancer, rectal cancer, cancer of the anal region, stomach cancer, colon cancer, rectal cancer, cancer of the anal region, stomach fallopian tubes, carcinoma of the endometrium, carcinoma of the cervix, carcinoma of the vagina, carcinoma of the endometrium, cancer, of the small Hodgkin's lymphoma, cancer of the esophagus, cancer of the small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   intestine, cancer of the endocrine system, cancer of the thyroid gland, cancer of the parathyroid gland, cancer of the adrenal gland, sarcoma of soft tissue, cancer of the urethra, cancer of the penis, prostate cancer, chronic acute leukemias including acute myeloid leukemia, chronic myeloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of treating (MI) cancer in a mammal comprising administration of a human anti-CTLA-4 (cytotoxic T lymphocyte antigen-4) antibody. Also included are: treating cancer in a mammal by administering more than 10 mg/ml of a human anti-CTLA-4 antibody; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancer; cytostatic; neoplasm; antibody; antibody therapy; igg; CTLA-4; cytotoxic T lymphocyte antigen-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating cancer in mammal who has undergone stem cell transplantation, comprises administering human anti-cytotoxic T lymphocyte antigen-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                            variant proteins having an increased host string content and reduced immunogenicity. This sequence represents a variable light chain of a human antibody protein used in a human germ line comparison of the
protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The new invention relates to selecting an antibody with a reduced risk of inducing an anti-human antibody (HAFA) response in the host. The method comparises providing an immunoglobulin gene encoding a candidate antibody and comparing it with an immunoglobulin gene from the recipient. Also claimed is a method of excluding an antibody from use in the treatment of a host. Also given are transgenic animals and methods for identifying antibodies or for screening or agente that inhibit the induction of HAHA response; kit for detecting an antibody or assessing the risk of a HAHA response in a patient; and a method of increasing the probability that a HAHA response will be detected in a transgenic mouse. The method further comprises repeating the steps of providing, comparing, and selecting for more than one immunoglobulin gene or for every immunoglobulin gene or the immunoglobulin gene
leukemia, acute lymphoblastic leukemia, chronic lymphocytic leukemia, solid tumors of childhood, lymphocytic lymphomas, cutaneous T cell lymphoma, cancer of the bladder, cancer of the kidney or ureter, renal cell carcinoma, carcinoma of the renal pelvis, neoplasm of the central nervous system (CNS), primary CNS lymphoma, tumor anglogenesis, spinal axis tumor, brain stem glioma, pituitary adenoma, Kaposi's sarcoma, epidermoid cancer, squamous cell cancer, T-cell lymphoma, environmentally induced cancers including those induced by asbestos, myeloma, neuroblastoma, and pediatric sarcomas. The present sequence represents human anti-CTLA-4 antibody, Kappa chain protein SEQ ID NO:36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Selecting an antibody with a reduced risk of inducing a human anti-human antibody response comprises providing an immunoglobulin gene encoding a

```

```
is a V gene, e.g. a VH (heavy) gene or a VL (light) gene. The methods are useful for selecting an antibody with a reduced risk of inducing HAHA response. The antibody, composition, and method are useful for treating diseases, e.g. leukemia or autoimmune diseases. The present sequence is a human antibody Vkappa protein sequence.

Sequence 89, Application US/0847787B

Patent No. 5730979

GENERAL INFORMATION:
APPLICANT: Latinne, Dominique
TITLE OF INVENTION: LO-CD2a Antibody and Uses Thereof for Inhibiting T-Cell Activat
TITLE OF INVENTION: LO-CD2a Antibody and Uses Thereof for Inhibiting T-Cell Activat
TITLE OF INVENTION: LO-CD2a Antibody and Uses Thereof for Inhibiting T-Cell Activat
NUMBER OF SEQUENCES:
ADDRESSEE: Carcella, Byrne, Bain, Gilfillan,
ADDRESSEE: Cacchi, Stewart & Olstein
STREET: New Jersey
CONTRY: No.S.A.
ZIP: 07068

COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch diskette
COMPUTER: WordPerfect 5.1

CURRENT APPLICATION NUMBER: WordPerfect 5.1

CURRENT APPLICATION NUMBER: US/08/477,877B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
